#### Abstract

This is a great paper and it has a concise abstract. **Keywords:** List of keywords, comma separated.

#### 1. Introduction

This is where the content of your paper goes. Some random notes:

- You should use LATEX(Lamport, 1986).
- JMLR/PMLR uses natbib for references. For simplicity, here, \cite defaults to parenthetical citations, i.e. \citep. You can of course also use \citet for textual citations.
- You should follow the guidelines provided by the conference.
- Read through the JMLR template documentation for specific LATEXusage questions.
- Note that the JMLR template provides many handy functionalities such as \figureref to refer to a figure, e.g. Figure 1, \tableref to refer to a table, e.g. Table 1 and \equationref to refer to an equation, e.g. Equation (??).

### Acknowledgments

We thank a bunch of people.
